Project Overview

Our modern society is undergoing a significant digital and ecological transition due to rapidly changing global conditions. The primary goal of the **No One Behind!** Project is to empower adult individuals facing various obstacles - economic, social, cultural, geographical, health-related, migrant backgrounds, disabilities, educational difficulties - to access job opportunities in the emerging digital and ecological field.

Implementation

To achieve our mission, we will develop tailored learning solutions designed to equip our target group with essential digital and ecological skills. Additionally, we will provide vocational guidance to facilitate their integration into the green sectors:

- The production of training materials for partner countries includes essential digital tools to enhance their skills, provide information about specific green sectors, and offer insights into the conditions within these sectors, such as required competencies, challenges, and job types.
- Design and implementation of an e-learning platform to host training materials and provide vocational guidance, with experimentation involving at least 100 learners across the five partner countries.
- Social activities aimed at reaching out and communicating the project's impact to the broader community.

Project Duration

The project spans 30 months, and is funded by the Erasmus+ program.

For more information about the program and the latest updates, visit our website or follow us on social media.
